EDUCATION

09/2019 – present
Japan

MS in Applied Informatics, *Hosei University*
GPA: 3.58
Thesis: Japanese Coins and Banknotes Recognition for Visually Impaired People

08/2014 – 06/2019
Vietnam

BS in Computer Science, *University of Information Technology*
GPA: 8.24/10
Undergraduate Thesis: Traffic Violation Detection

LANGUAGES

- English
- Vietnamese

SKILLS

Machine Learning | Deep Learning

Object Detection | Image Processing | Tensorflow

Keras | Teamwork | Problem Solving

PROJECTS

04/2021 – present

MOEMO FRAMEWORK: Engagement Detection,
Research Center for Computing and Multimedia Studies, Hosei University, Japan
My Roles:

- Researched, implemented a CNN to detect student's emotions.
- Detected and analyzed eyes' positions and their movements using OpenCV.
- Combined the results of Emotion Detection and Eye Detection to detect student's engagement.
- Combined Face Recognition into the framework to identify student ID and track their activities.
- Created, Imported the result to Database.
- Designed and implemented the function which can automatically generating and sending report to lecturer.

08/2019 – 09/2021

Japanese Coin and Banknote Detection,
Intelligent Media Processing Laboratory, Hosei University
My roles:

- Designed, collected, and processed the Japanese Coins and Banknotes.
- Implemented the Monocular Depth Prediction to effectively leverage the depth information of images.
- Processed, trained state-of-the-art Object Detection (YOLO nets) on both RGB images and Depth images to detect Japanese Coin/Banknote.
- Improved the accuracy of the system by using Ensemble Method. As the result, my work achieves 74.1% mAP (improve from 70% to 74.1%).

04/2019 – 06/2021 **Face Recognition, Time Series Classification,** *BeeSight Soft Company, Vietnam*
My Roles:
- Processed time series data using some machine learning methods: SVM, KNN algorithms.
- Implemented Face Detection with a small face.

09/2014 – 06/2019 **Traffic sign detection, Traffic Violation Recognition,**
Multimedia Communications Laboratory, University of Information Technology,Vietnam
My Roles:
- Collected and processed data.
- Implemented Haar Cascade to detect traffic signs.
- Implemented and evaluated SVM algorithm to classify violation or non-violation. The accuracy achieves 54.8% with VGG19 features.
- Implemented, evaluated YOLO and Faster RCNN models to detect the violating vehicles. This work achieves 92.21% mAP with Faster RCNN model.
